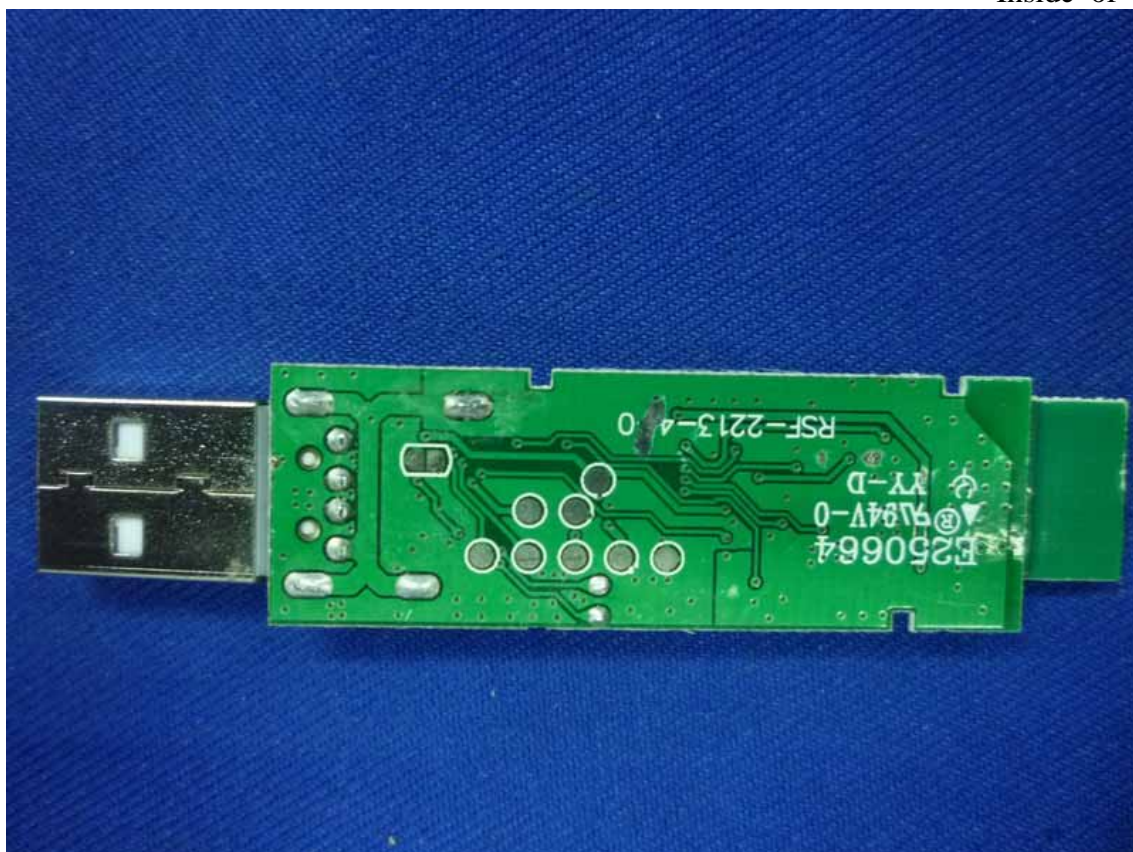

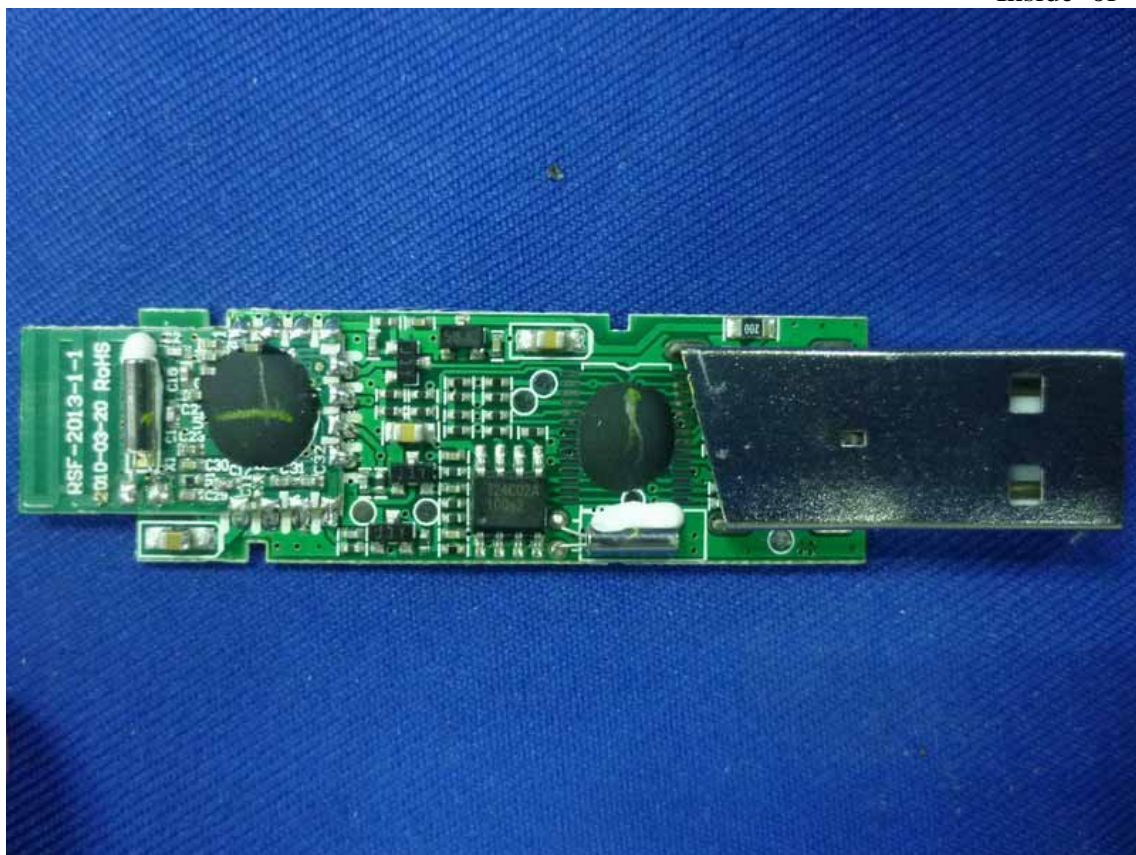

Figure 5
Inside of the EUT

A photograph of a green printed circuit board (PCB) resting on a blue textured surface. The PCB features a large circular white pad in the center-left, surrounded by several small holes. To the left of the pad, there is a row of gold-colored components, possibly connectors or capacitors, mounted on the board. The right side of the PCB is mostly blank green, with a vertical line of small holes. The overall appearance suggests a custom or prototype electronic component.
